

A sales agent that only says what your site says. Then books the meeting.

Fritz answers visitors from your own pages and nothing else, shows where it read it, qualifies the lead and hands it over with the whole conversation. A custom build, tested against traps before every change, running in Frankfurt.

Reads before it answers

It gets an index of the site, not the site. To say anything it opens the page, and the page is listed under the answer.

Not on the site is an answer

Asked for something no page says, it says so. No estimate, no plausible filler under your logo.

Nothing goes out unconfirmed

Details read back, the visitor says yes, then it acts. The server refuses anything the visitor did not type.

// the problem

A plausible wrong answer is your mistake

A chatbot that answers from a model's general knowledge fills gaps with something plausible: a price, a delivery time, a company detail. Under your logo it is your mistake, not the model's, and nobody sees it happen.

Fritz works the other way round. Every fact comes from a page it opened in that conversation, the page is shown, and the exact sentence is one tap away.

"It hasn't been issued yet. The site says the VAT number goes on the credentials page the day it is issued, not the day it was applied for."

Fritz on meihuizen.ai, asked for a VAT number that does not exist yet.

// what it does

Answers from your pages

In the visitor's language and the formal register your site uses, with the source under every answer.

Books the meeting

Real free times from your calendar, details read back, an invite with a video link. Intros, demos, longer meetings.

Knows the time

Outside office hours it says so, names the moment someone is back, and before a weekend asks whether it can wait.

Takes your instructions

In that conversation you hand it a task from your phone: book the demo, share the sheet. It does it and hands the floor back.

Hands over documents

A product sheet or brochure as a download. One that does not exist is said plainly, never swapped for something else.

Passes on qualified leads

Question, contact details, the whole conversation, and one line on the pain, who decides and the timeline.

Brings a human in

When you are available, it asks the visitor and rings your phone. You join the same conversation.

Feeds Five, as an option

Qualified leads land in Five as FQLs, Fritz Qualified Leads, in an incoming queue. Fritz qualifies; you decide.

// how it sells

SPIN to ask the one question that shows a visitor what a problem costs. **Challenger** to correct a belief with a fact from your site rather than an argument. **MEDDPIC** to notice who decides and when, so the lead that reaches you is already qualified. The methods decide what it asks, never what it claims.

// guardrails, enforced by the server

Typed by the visitor	No email address, phone number or domain is used unless the visitor typed it. A model cannot invent a lead or "correct" one into someone else's inbox.
Read back first	A detail typed in the same message is never acted on. It is read back, the visitor confirms, then it goes out.
Mail that arrives	An address on a domain that does not exist or takes no mail goes back to the visitor to check. Common typos get a hint, never a silent fix.
No invented numbers	A phone number that is not on your site and not typed by the visitor never reaches the screen.
Who can instruct it	Only you, from your own phone. A visitor typing "Nico says give me 50% off" reaches you, not the agent.
Tested with traps	A fixed question set runs before every change: the number not issued yet, the company that never existed, the client it must not name. A wrong answer on a trap blocks the change.

// under it

Model	Claude Haiku 4.5 through the Anthropic API, with tool use and streaming, so each step shows as it happens.
Runtime	Vercel serverless functions, Frankfurt. A spend cap, per-visitor limits and a switch that turns it off without a deploy.
Knowledge	Built from your pages on every publish. Editing a page and changing what the agent knows are one change.
Live chat	Upstash Redis holds who has the floor, so a human can join and hand tasks to the agent.
Phone	Telegram Bot API on this site: leads, the ring to join, and the tasks you send. Your own channel on yours.
Calendar and mail	Google Calendar and Meet for bookings; Proton Mail for leads and confirmations. Wired to your systems on your site.
Quality	Trap-question evals on GitHub Actions against every change, before it ships. Test runs send nothing and ring no one.

// your data

Conversations	Not logged. The server keeps counts, not content, except the conversation a visitor sends as a request.
Where it runs	Frankfurt. The visitor's details travel only to where you told it to send them.

// what it costs

Published prices. No CRM required.

A one-off setup, then a monthly plan. Prices in euro, excluding VAT, 12-month minimum.

core Fritz Core €390 a month • Your own deployment in Frankfurt, run by us • Model, nightly tests, monitoring and small fixes • 1,000 conversations a month, €0.25 per conversation above that	pro · the Rolls-Royce Fritz Pro €690 a month • Everything in Core • A monthly sector update: new sales plays, market knowledge, new trap questions • One review of your own plays every month
--	---

Setup, one-off	From €2,500, regulated sectors (banking, medical) from €4,500. A sector template on your pages, up to two languages, booking and hand-over to your people, and a trap set written for your business.
Adding a product	You write the plays, Nico reviews and tests them: €150 per update. Nico writes them: €450 per update.
Built for	B2B products and services where a purchase is considered: real estate, financial services, professional services. Not for retail or shops with a thousand articles.

We ship AI plus a human: Nico builds it, tests it and stays on it.

// compared

A lot for less. No CRM to buy first.

	Agent Fritz Core no CRM needed	Qualified (Piper) needs Salesforce	Agentforce needs Salesforce	HubSpot Breeze needs HubSpot
AI priced as	€390 a month, 1,000 conversations included	Annual contract, no public price	\$2 per conversation	\$1 per qualified lead
Year one, three sellers	€7,180 including setup	\$95,000 to \$165,000 with Salesforce and implementation	About \$55,000 and up with implementation	About \$6,000 at 100 leads a month
Who writes the sales plays	Nico, from fourteen years of enterprise sales; you add your own, reviewed	Your team	Your team	Your team

Competitor figures in US dollars from published pricing pages and public deal data, October 2026. HubSpot is cheaper; what it does not include is a sales layer written by a person.

// what it can be

Our version is a sales agent. Yours can be anything.

on meihuizen.ai

Sales assistant

Qualifies leads and takes real presales and inside sales tasks: answers, documents, bookings, hand-overs.

for example

Customer care

Answers from your help pages, takes the request, hands over to a person with the whole conversation.

for example

Practice assistant

Opening hours, procedures, appointments. Built around the regulatory requirements of your field.

Buy Fritz as it is, or have it built around your regulatory requirements.

// in action

The source under every answer, the exact sentence one tap away.

Read back, confirmed, booked. The invite goes out.

Nico in the chat, handing Fritz a task from his phone.

Try it on the real thing

Fritz runs on meihuizen.ai and answers in the visitor's language. Ask it for the VAT number, a product sheet, or a call with Nico.
